Abstract of JP7065217

PURPOSE:To enable operate in any style and improve the convenience of operation by a wheelchair user and the operability so that the wheelchair user can operate the machine on the wheelchair by providing a movable subordinate operation part.

CONSTITUTION:The subordinate operation part 12 equipped with a magnetic card read part 9, a key input part 10, and a display part 11 is connected to an automatic teller machine body 1 by a connection cable 8. When transaction operation is started at a main operation part, subsequent transaction operation is permitted at the main operation part and the contents of inputted data are displayed at a main display part. When transaction operation is started at the subordinate operation part 12, on the other hand, subsequent transaction operation is permitted at the subordinate operation part 12 and the contents of inputted data are displayed at the subordinate display part 11.

Consequently, the automatic teller machine can be operated at a free position regardless of the installation configuration and dedication configuration of the machine. Further, at-hand operation using the subordinate operation part 12 is enabled to reduce misinput and misconfirmation.
